CPS Foundation Shield

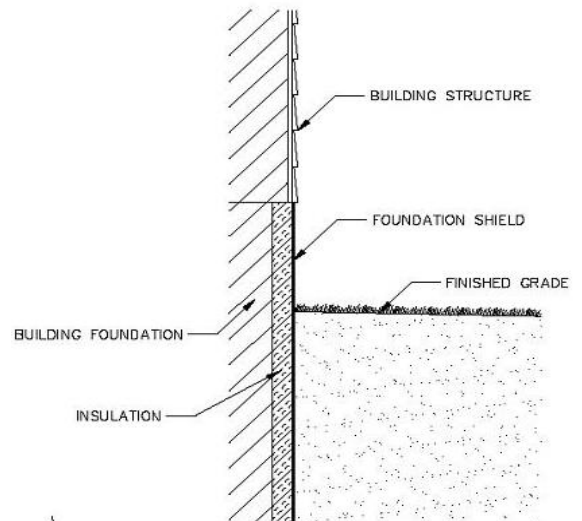

Protect your foundation and insulation and increase the energy efficiency of your home with our easy to install system.

Foundation Shield is designed for installation over foundations as an extra barrier of protection against moisture and insects, trapping the energy used to heat and cool your home. According to DOE published literature, heat loss from an un-insulated, conditioned basement may represent up to 50% of a home's total heat loss. Since concrete offers little resistance to heat loss, it is recommended by the DOE to insulate your home's foundation. Our Foundation Shield can significantly reduce your home's heat loss and provide a durable, attractive, and cost-effective finish for your foundation insulation project.

Product Features

- ✓ Attractive Textured Gray finish complements the color of any home
- ✓ Foundation Shield is available in rolls 16", 24", or 48" wide x 50' long
- ✓ Pest and insect resistant
- ✓ Highly moisture resistant
- ✓ Resists stains and odors
- ✓ Durable and shatter resistant
- ✓ Install the panels directly over solid walls or insulation
- ✓ Full array of fasteners, trims, and adhesives available for professional installation
